

Cypress, California, Sep 21, 2007 - After successfully launching Full-Sized VersaKey, ID TECH has announced the Compact VersaKey 230 POS Keyboard with 14 inches width form and factor.

Having MagStripe and keyboard technologies in one integrated product provides space saving convenience for Point of Sale (POS) electronic cash registers, Health Care terminals, Loyalty database computers, Security and Customer Service applications, and many other applications that can make use of the combined technologies.

The VersaKey 230 is a full-function product with an enhanced keyboard layout. The 103 keys & Windows keyboard layout provides separate keys for the numerical pad, control, and function keys. Same as Full-Size VersaKey, VersaKey 230 guarantees a minimum of 1,000,000 card swipes and 20,000,000 key operations. In addition, the VersaKey 230 has 3 year warranty.

The VersaKey 230 MagStripe reader decodes data characters from the individual tracks. Any credit, debit, loyalty, or any other ISO 7811 compliant card can be reliably read. The reader output is versatile; its output is programmable to provide the card data characters in application friendly formats using the 'MagStripe Configuration Utility' software. The utility programs the reader to edit and format data, such as dividing, rearranging, and parsing the magnetic stripe data. Many Keyboard language options are available providing the appropriate key positions and key-top characters.

The VersaKey 230 is designed for the durability and the reliability needed to meet the demand of high use POS environments. USB (keyboard) and PS/2 (PC) interfaces are available. For application operation, both communication interfaces provide the same versatile features. Specialty service objects for OPOS & JPOS are available to support POS applications. Plug 'N Play operation is standard.
