

CYPRESS, California, July 2, 2007 - ID TECH, a leading manufacturer of automatic identification products, adds uSign™- an electronic signature capture device to its product line. uSign has Real-time back-lighted graphic LCD signature display. The users can view their signatures during the signing process. The signature display is compressed and provided to the host system. The LCD display also support interactive text, graphic, and pen-tap commands that would allow the user to navigate the process with just the stylus pen.

There is a growing popularity for using electronically captured signatures especially for Point of Service (POS) applications. Electronic signature capture reduces transaction time, eliminates sorting paper, provides convenient electronic storage & transmission, and gives legal accountability (non- repudiation) for POS transactions. With superior ergonomic design for ease-of-use and real-time signature quality, uSign provides enhanced compliance with eSignature legislation and increased signature security. It is ideal for retail, hospitality, Self-service, and Quick Service Restaurants.

ID TECH introduces two models of signature capture devices - uSign 100 & uSign 200. uSign 100 is designed for integration with systems, such as Kiosk, vending machines and self-service checkout systems. The uSign 200 is a counter top device which is ideal for retail transaction applications. Both models come with a metal mounting plate, which provides the uSign with a mounting option. A removable overlay on the uSign's display covers and protects the signature area, allowing replacement when the signature area becomes worn from stylus use.
